PROFESSIONAL SUMMARY

Driven third-year Computer Science student at Farmingdale State College seeking a Fall 2026 software engineering internship to apply academic knowledge in real-world settings. Strong foundation in Java, Python, C++, JavaScript, React, SQL, and MongoDB, with experience building web applications, integrating APIs and databases, and leading engineering teams. Quick study with the ability to rapidly learn new technologies and translate ideas into practical, user-focused software.

EDUCATION

Farmingdale State College

Bachelor of Science in Computer Science; GPA: 3.9

Farmingdale, NY

Expected May 2027

- **Relevant Coursework:** Advanced Programming, Data Structures & Algorithms II, Database Management, Operating Systems, Software Engineering, Object-Oriented Programming

EXPERIENCE

Unadat

New York, NY

Software Engineering Intern / Project Management

Feb. 2025 – May 2025

- Led a 7-member cross-functional Agile Scrum team of 4 engineers and 3 product team members, facilitating sprint planning, daily standups, and retrospectives while maintaining 90%+ sprint task completion and supporting timely project delivery.
- Developed an interactive insurance calculator using HTML/CSS, JavaScript, and PHP that analyzed 9 user factors to generate personalized premium estimates and coverage options, reducing estimate generation time from approximately 5 minutes to under 30 seconds.
- Implemented a goal-oriented user journey that analyzed 5+ customer inputs to automatically generate 3 personalized coverage tiers, custom coverage estimates, and actionable recommendations for reducing insurance costs and improving financial decision-making.

FIRST TAEHS Robotics

Jamaica, NY

Lead Software Engineer

Sep. 2021 – June 2023

- Led a team of 10 student engineers across software, mechanical, electrical, and pneumatics disciplines, overseeing project coordination, task delegation, and team development.
- Engineered a pneumatics-driven crane/claw mechanism by programming the robot in Java and LabVIEW, optimizing motor control logic and wiring to achieve a 200% increase in robot movement speed.
- Developed a custom timing algorithm for the pneumatics system load-up sequence, reducing battery consumption by 47% and extending operational runtime during competition.
- Mentored the incoming student team on robot programming architecture, codebase structure, and best practices to support continuity and efficient onboarding.

PROJECTS

Receiptify | *Gemini 2.5 Flash API, React.js, Tailwind CSS, Supabase*

[GitHub](#) | [Demo](#)

- Developed an application for storing and organizing receipts to support users' financial well-being.
- Integrated the Gemini API to scan uploaded receipts and automatically categorize purchases such as Food/Dining and Entertainment.
- Used Supabase for secure login, sign-up, and authentication.

Doc Discovery | *JavaScript, Apps Script, BetterDoctor API*

[GitHub](#) | [Demo](#)

- Developed a doctor-matching platform using HTML5/CSS3 and JavaScript, with Google Sheets and Apps Script as a lightweight database for API data; presented curated doctor matches based on specialty, insurance, and symptoms through a Tinder-like interface.

CampusDash | *JavaScript, Firebase, OpenStreetMap API, Leaflet.js*

[GitHub](#)

- Engineered a web application that streamlines on-campus food delivery by connecting students with peer dashers.
- Used Firebase Authentication and Firestore to implement user accounts and a dynamic order-tracking system with real-time updates for customers and dashers.
- Integrated OpenStreetMap and Leaflet.js to render dynamic campus maps, location-based vendor selection, and delivery tracking.

TECHNICAL SKILLS

Programming Languages: Java, Python, C++, JavaScript, TypeScript, SQL, HTML/CSS

Frameworks & Libraries: React.js, React Native, Next.js, Node.js, Tailwind CSS, Django, Spring Boot

Databases & Backend: MongoDB, PostgreSQL, MySQL, Firebase, Supabase

Tools & Platforms: Git, GitHub, Docker, Figma, LabVIEW
